PROFESSIONAL SUMMARY

Senior Frontend Developer with 6+ years of experience building high-load business and administrative web applications with Vue.js and Nuxt.js. Currently lead frontend engineer for a 12-location cinema chain, where I own the admin panels, the public website and the Electron-based cashier workstations (POS) used daily by front-desk staff.

I specialise in complex client-administrative systems: designing frontend architecture, breaking large products into maintainable modules and reusable components, and keeping them fast (PageSpeed 90+, Core Web Vitals in the green). Alongside delivery I mentor developers, run merge-request reviews and set shared code standards.

I treat frontend work as solving business problems rather than closing tickets — questioning requirements when it helps the product, and choosing the solution that fits the business, not the one that is most interesting to build.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Sass

Frameworks: Vue.js 2 / 3 (Options & Composition API), Nuxt.js 2 / 3, Node.js, Electron.js

State & Data: Pinia, Vuex, REST APIs, GraphQL (incl. REST → GraphQL migration), WebSockets, Axios

UI Libraries: Tailwind CSS, Vuetify, BootstrapVue, Bootstrap, Vuexy

Media & Maps: HLS, Video.js, Leaflet, Google Maps, FullCalendar.js

Performance & SEO: PageSpeed / Core Web Vitals optimization, SSR, technical SEO, i18n

Security & Access: Authentication, role-based access control (RBAC), token refresh strategy, session security

Payments & Monitoring: LiqPay, Vchasno PRRO (receipt fiscalization), payment terminals, barcode/QR scanners, Sentry

Platforms & Tools: Git, AWS, Electron auto-update, application logging

Engineering practices: Frontend architecture, code review, mentoring, component design systems, cross-platform desktop apps

PROFESSIONAL EXPERIENCE

Lead Frontend Developer — Planeta Kino, Kyiv, Ukraine

January 2022 – Present

- Own the frontend of a cinema chain with 12 locations: internal admin panels, the public website (planetakino.ua) and the cashier workstation (POS/ARM) systems used in every cinema.
- Launched the cashier workstation (POS/ARM) from scratch — from the first prototype to rollout across all 12 cinemas; it is now the system front-desk staff work in every day. Built as a cross-platform Electron desktop app integrating payment terminals and barcode/QR scanners for virtual loyalty cards, tickets, receipts and orders.
- Designed and built the authentication and access-control layer used across the admin panels and cashier workstations: role-based permission model, token refresh strategy and session security.
- Migrated the codebase from Vue 2.6 to 2.7 and then to Vue 3: moved components from the Options API to the Composition API and state management from Vuex to Pinia, keeping the product shipping throughout.
- Migrated the API layer from REST to GraphQL, including a hybrid REST + GraphQL setup.
- Mentor a team of 5 frontend developers: review merge requests, set shared code and component standards, and onboard new engineers.
- Raised PageSpeed scores to 90+ on key public pages and brought Core Web Vitals to target thresholds through rendering, asset and bundle optimization, and handled technical SEO with SSR in Nuxt.js.
- Implemented auto-update for the Electron workstations, so new versions reach all 12 cinemas without on-site intervention, and built an application logging system that makes incidents on remote machines diagnosable without physical access to the till.
- Delivered the chain's internal product suite end-to-end: analytics and reporting, a showtime scheduling tool, a visual builder for auditorium seat maps, real-time interaction in the ticket purchase flow, ticket refunds, a discount system, a marketing and promotions system, and marketing mailings.
- Integrated LiqPay payments and receipt fiscalization through the Vchasno PRRO service, covering both online ticket sales and the in-cinema cashier workstations.
- Set up Sentry from scratch across the web applications and the Electron workstations, giving the team visibility into production errors and cutting time to diagnose incidents.

- Took part in launching the company's online streaming platform, implementing playback with HLS and Video.js and real-time updates over WebSockets.
- Take part in designing and implementing the overall project architecture, and build the complex components and modules other developers reuse across products.

Stack: Vue.js, Nuxt.js, JavaScript, Pinia, Tailwind CSS, Vuexy, BootstrapVue, Axios, GraphQL, REST, WebSockets, AWS, Electron, Sentry, LiqPay, Vchasno PRRO, HLS, Video.js

Frontend Developer — VJET Group, Dnipro, Ukraine

August 2021 – January 2022

- Delivered client-side applications for international clients end-to-end: designed the architecture, implemented the key modules and owned performance and maintainability.
- Worked on a marketing platform for an advertising company: an admin panel that managed and delivered advertising content to 1,000+ tablets deployed across Ukraine.
- Admin panel and B2B/B2C website for a Polish furniture factory.
- Took part in building the admin panel for the "Choice" restaurant chain, covering the full flow — from creating a restaurant and its menu to order management and guest tipping.

Stack: Nuxt.js, Vue.js, REST, SCSS, Vuetify, BootstrapVue, WebSockets, Google Maps, i18n, FullCalendar.js

Frontend Developer — QuartSoft, Kramatorsk, Ukraine

May 2021 – July 2021

- Built a nationwide cartography service for Ukraine, working with cadastral and land-registry data.
- Delivered both the desktop and the mobile version of the platform, focused on map rendering performance and usability on large datasets.

Stack: Nuxt.js, Leaflet (interactive maps), SCSS, REST, vanilla JavaScript

Frontend Developer — Foxprime.tv, Kyiv, Ukraine

August 2020 – May 2021

- Took part in launching a streaming service from the ground up, building both the admin panel and the public website for a platform with 4,000+ active users.
- Built the streaming experience for TV channels, movies and radio, including a custom video player on top of Video.js with HLS playback.
- Developed the subscription flow and the user account area: plans, recurring billing and LiqPay payments.
- Replaced BootstrapVue with custom in-house components, cutting bundle size by 45% and giving the team full control over the UI.
- Contributed to system architecture, SEO and performance optimization.

Stack: Nuxt.js, Vue.js, JavaScript, WebSockets, GraphQL, HLS, Video.js, custom video player, LiqPay, custom Vue components, REST, SCSS, SEO

EDUCATION

Bachelor's Degree — Dnipro State Technical University, Kamianske, Ukraine (2018)
